AcuSense Technology

Hikvision's AcuSense technology embeds deep-learning algorithms into security cameras and video recorders to equip businesses and home-owners with smart tools to take security to the next level, both indoors and outdoors.

Features

- Detects intrusion threats in real time and triggers alerts to users' mobile phones for faster response.
- Differentiates people and vehicles from other moving objects, allowing security teams to focus on real threats. *High-end camera models with AcuSense also use Hikvision's ColorVu technology for 24/7 colour imaging.
- AcuSense technology applies labels to recorded video footage with people and vehicles, speeding up video searches, minimizing manual effort, and reducing overall security costs.
- Select models of cameras offer built-in sirens and strobe-light alarms. Even better, these cameras can broadcast custom voice messages to warn trespassers to leave a restricted area.

ColorVu Cameras

These solutions combine to enhance security and enable more proactive monitoring of your property.

Features

- Panoramic camera delivers seamless 180-degree colourful images with no blind spots
- Up to 4K resolution provides a rich and detailed full-colour image
